

# Test No. 1.3

The Question: Will *HOTBOX*® enclosures stand strong against punishment from Mother Nature?

The Answer: ***Absolutely.***

**ASSE 1060 Certified**

Not even 140 mph winds could overpower the structural integrity of *HOTBOX* enclosures, as we proved during the rigorous wind testing process to meet Miami-Dade County standards. Combine this distinction with our ASSE certification for Free Span Structural Design (Test No. 1.3), and it's easy to see why more companies trust *HOTBOX*, than any of the competition, to protect their valves.

Strength. Quality. Reliability. *HOTBOX* enclosures truly provide shelter from the storm.
