

Test No. 3.2

The Question: Can *HOTBOX*® enclosures stand up to substantial loads and maintain structural integrity under constant and crushing pressure?

The Answer: ***Absolutely.***

HOTROK®

 **ASSE 1060 Certified**

This may sound heavy, but it's true. When your valves are protected by a *HOTBOX*® enclosure, they'll be able to handle weights as high as 100 pounds per square foot as if they were nothing. How do we know? Because *HOTBOX* passed the ASSE certification structural test (Test Number 3.2) with flying colors, and not every pipe protection product can say that. No wonder *HOTBOX* sells more enclosures than anyone else. Because when it comes to handling a load, we're more than worth the weight.
