

VALVE GUARD... *Security in an insecure world.*

Aesthetic Appeal

Landscape applications... blending in with the surroundings... "out of sight, out of mind"... VALVE GUARD® enclosures provide a professional finish to your piping and equipment installation. These cosmetic enclosures, available in artificial rock designs, support "bar" and "bige" covers and enhance the installation.

Flip-top Access

Many VALVE GUARD® enclosures feature flip-top access to provide instant entry for maintenance and/or testing of the equipment contained inside.

Fiberglass Construction

The 3/16" thick fiberglass composite features a UV resistant gel coat finish that is polished to a "yacht quality" appearance. Impact and vandal resistant, the lockable enclosure provides security for valves, pumps and equipment contained inside.

Overlapping Seams

Seams on sides and front overlap to provide both vandal protection and weather resistance to protect the valuable equipment contained inside. The lid overlaps the side-walls with double 90° turns to prevent tools, sharp objects, wind and rain from entering the enclosure.

Internal Anchors

All VALVE GUARD® enclosures feature internal anchors...no external anchors that can be chiseled off or removed with common tools. The anchors are vertically adjustable to provide secure attachment to uneven field slab finishes.

Drainage

All VALVE GUARD® enclosures are equipped with ASSE 1060 tested drains to insure complete evacuation of equipment discharge-insuring that the valuable equipment housed inside will never be subjected to submersion. A minimum of 2 drains at opposing ends means no chance of drain obstructions!

ASSE 1060 Certified

VALVE GUARD® enclosures have been lab tested and certified by ASSE as meeting standard 1060 requirements for structural strength, drainage capacity, material construction, equipment access and functional design.
